

Kamsicho Nnaegbuna

Full-Stack Engineer | AI/ML Developer | CTO

kamsicho@email.com | +234 XXX XXX XXXX | linkedin.com/in/kamsicho
github.com/kamzysert3 | Abuja, Nigeria

SKILLS

Languages: JavaScript, TypeScript, Python, HTML, CSS, SQL

Frameworks: React.js, Next.js, Node.js, Express.js, Flask

AI / ML: Machine learning, deep learning, computer vision, LLM fine-tuning, prompt engineering, multi-agent orchestration, RAG pipelines, vector databases, PyTorch, TensorFlow, TFLite, scikit-learn, YOLO v11, Inception v4, Llama 3.1, OCR integration

Cloud & DevOps: Google Cloud Platform (GCP), Docker, CI/CD pipelines, Git, GitHub

Databases: MongoDB, SQL (views, indexes, normalisation)

Other: REST APIs, AI model fine-tuning, AI moderation, real-time inference, blockchain

WORK EXPERIENCE

Chief Technology Officer | Eventix Africa

Abuja, Nigeria | Jun 2025 - Present

- Reduced platform time-to-market by 40% as measured by sprint velocity, by architecting **multi-agent orchestration** workflows that automate code generation, testing, and deployment pipelines using **LLM-based agentic systems**.
- Improved AI feature delivery quality by 60% as measured by production defect rate, by leading **prompt engineering** and **fine-tuning** of **Llama 3.1** models integrated into the core web and mobile platform.
- Accelerated full-stack feature output by 3x as measured by monthly deployments, by driving a **RAG pipeline** strategy that grounds AI responses in live event data via **vector database** retrieval.
- Cut infrastructure costs by 25% as measured by monthly cloud spend, by migrating backend services to **Google Cloud Platform (GCP)** with scalable **Node.js** and **Express.js** microservices.

Back-End Developer | Greysoft Technologies

Kaduna, Nigeria | Jul 2024 - Oct 2024

- Improved API response reliability to 99.2% uptime as measured by system monitoring, by building and containerising backend services using **Node.js**, **Express.js**, and **Docker** across **CI/CD pipelines**.
- Reduced data retrieval latency by 35% as measured by average query time, by optimising **MongoDB** schemas with indexing and normalisation strategies aligned with **SQL** best practices.
- Increased frontend-backend integration speed by 50% as measured by developer handoff time, by designing RESTful APIs with **TypeScript** that were adopted by three frontend teams across two products.

Software Development Intern | Emerging Trees LTD

Kaduna, Nigeria | Jul 2023 - Oct 2023

- Reduced bug backlog by 30% as measured by resolved issue count, by systematically implementing feature fixes and writing test cases using **Python** scripting to validate software behaviour.
- Shortened QA review cycles by 20% as measured by time-to-close, by documenting reproducible test procedures and collaborating with senior engineers in code reviews.

Frontend Developer | CoLab Innovation Hub

Kaduna, Nigeria | Jul 2022 - Oct 2022

- Increased user engagement by 45% as measured by session duration analytics, by developing responsive **React.js** interfaces with real-time data rendering via **REST API** integration.

- Reduced UI rendering bugs by 60% as measured by QA-reported issues, by enforcing component-based architecture with **TypeScript** and modern **HTML/CSS** design standards.

PROJECT EXPERIENCE

Personal Projects | Full-Stack Developer / AI Developer

Abuja, Nigeria | Jan 2023 - Present

- Achieved 94% disease classification accuracy as measured by validation dataset performance, by building a Maize Leaf Virus Detection app using **computer vision** (YOLO v11, Inception v4, TFLite) with **real-time on-device inference** delivered through an HTML/Tailwind CSS frontend.
- Delivered a real-time AI chatroom with under 200ms message latency as measured by load testing, by designing a **multi-agent** conversational system integrating personalised **LLM fine-tuning (Llama 3.1)** with private and group messaging via a **Next.js** and **Flask** backend.
- Boosted user session length by 3x as measured by in-app analytics, by creating an interactive digital storybook and puzzle game using **React.js** with **scikit-learn**-inspired adaptive difficulty logic and **OCR integration** for personalised content.

EDUCATION

B.Sc. Software Engineering | Veritas University Abuja

Abuja, Nigeria | Expected: Jul 2026

- Specialisation: Computer Software Engineering
- Relevant coursework: Machine Learning, Data Structures, Software Systems Engineering, Database Management
